Award **TWO** marks for the correct answer of 384

If the answer is incorrect, award **ONE** mark for evidence of appropriate method, eg

$$7 + 5 + 4 = 16$$

$$16 \times 24$$

OR

$$7 \times 24$$

$$5 \times 24$$

$$+ 4 \times 24$$

*Answer need not be obtained for the award of **ONE** mark.*

Up to 2

Gives the three correct numbers in their correct positions, ie:

1800		
75	24	
12.5	6	4

Accept unambiguous indication

Accept equivalent fractions and decimals, eg:

- accept $12\frac{3}{6}$ for 12.5

W2 L4 – Long Division

Award **TWO** marks for the correct answer of 24

If the answer is incorrect, award **ONE** mark for evidence of appropriate working which contains no more than **ONE** arithmetical error, eg

- repeated addition / subtraction methods, eg

$$\begin{array}{r} 504 \\ -210 \quad 10 \times 21 \\ \hline 294 \\ -210 \quad 10 \times 21 \\ \hline 84 \\ -84 \quad 4 \times 21 \\ \hline 0 \end{array}$$

wrong answer

- factor / multiple methods, eg

$$504 \div 3 = 168$$

1. $168 \div 7 =$ wrong answer

- long division algorithm

wrong answer

$$\begin{array}{r} 21 \overline{)504} \\ \underline{420} \\ 84 \\ \underline{-84} \\ 0 \end{array}$$

- short division algorithm

wrong answer

$$21 \overline{)50^8 4}$$

*In all cases accept follow through of **ONE** error in working.*

*Working must be carried through to reach an answer for the award of **ONE** mark.*

***Do not** award any marks if the final answer is missing.*

Do not award any marks if the final answer is missing.

Variations on algorithms are acceptable, provided they represent a viable and complete method.

No mark is awarded for repeated addition / subtraction the wrong number of times.

Short division methods must be supported by evidence of appropriate carrying figures to indicate use of a division algorithm.

Up to 2

Award **TWO** marks for the correct answer of 26

If the answer is incorrect award **ONE** mark for evidence of appropriate working which contains not more than **ONE** arithmetical error, eg:

*Working must be carried through to reach an answer for the award of **ONE** mark.*

*In all cases, accept follow-through of **ONE** error in working.*

- Long divisional algorithm

wrong answer

$$\begin{array}{r} 36 \overline{) 936} \\ \underline{-720} \\ 216 \\ \underline{-216} \\ 0 \end{array}$$

Variations on algorithms are acceptable, provided they represent a viable and complete method.

Do not award any marks if the final answer is missing.

- Short division algorithm

wrong answer

$$36 \overline{) 93^{21} 6}$$

2.

Short division methods must be supported by evidence of appropriate carrying figures to indicate use of division algorithm and be a complete method.

- Repeated addition/subtraction methods, eg

$$\begin{array}{r} 936 \\ \underline{-360} \quad 10 \times 36 \\ 576 \\ \underline{-360} \quad 10 \times 36 \\ 216 \\ \underline{-216} \quad 6 \times 36 \\ \text{wrong answer} \end{array}$$

No mark is awarded for addition/subtraction the wrong number of times.

- Factorisation methods, eg:

$$936 \div 9 = 104$$

$$104 \div 4 = \text{wrong answer}$$
